DESCRIPTION OF STREAM CONDITION PRIOR TO LAND RECLAMATION COMMISSION PERMITTING (BY APPLICANT OR PRIOR OPERATOR), INCLUDING BANK CONDITION, BANK VEGETATION AND WATER QUALITY.

The Sand + gravel areas consist of 2 gravel bars Parallel to each other one next to Rivers edge and the other approximately 150 yards from Rivers edge, The river is bordered by fields on the side then a small Row of Trees then the second gravel bar, bordered by another field. Banks on South Side of River are eroding away, and other side well vegetated. Water quality is good to excellent. The exposed gravel bars are loosely packed + contain no vegetation, but some Brush + driftwood appears on bars. We have Accessible Roads to gravel bars so no trees or vegetation will need to be removed.

DESCRIBE METHODS TO RESTRICT DAMAGE TO STREAM BANKS OR STREAM BANK VEGETATION.

Gravel Removed will be maintained between River banks so water will flow natural and not directed at River bank. A 20 foot buffer will be maintained between the gravel removed at areas and river bank vegetation, there will be no damage to permanent vegetation of the River banks.

DESCRIBE METHODS USED TO MINIMIZE IMPACTS ON THE STREAM ENVIRONMENTS, CONFINING ACTIVE MINING OPERATIONS TO THE GRAVEL BARS RATHER THAN FLOWING WATER AND RESTRICTING HAUL ROADS THROUGH FLOWING WATER.

Gravel will be removed only on exposed gravel bars Gravel will be taken off the top of gravel bar to depth no deeper than the existing water level. If water rises in river and fills the removal area, we will not remove gravel from that area until water levels are gone. This will avoid erosion of ~~water~~ River banks and River flow. We will not have to cross River to remove gravel.
